

Multi-split enote prinašajo udobje v vsak prostor. Na eno zunanjo enoto je možno priklopiti vse do 5 notranjih enot. Pri izbiri notranjih enot moramo biti pozorni na moč posamezne notranje enote, ki ne sme presegati moči zunanje ter na skupno moč notranjih, ki za posamezno zunanjo enoto ne sme preseči vrednosti, navedenih v tabeli. Daikin je prve multi-split sisteme razvil že leta 1973. Že takrat so se zavedali, da si bomo želeli udobje, ki ga prinaša klimatska naprava v vseh prostorih našega doma. V spodnji tabeli so multi-split enote, ki podpirajo do pet notranjih enot. Obstajajo tudi večje enote, ki podpirajo priklop vse do devet notranjih enot. Le-te so del asortimana, v prvi vrsti namenjenega poslovni uporabi in niso predmet tega cenika.

Simbol termometra poleg vsake klimatske naprave pomeni, da se lahko na vsaki klimatskih napravi, ne glede na vse ostale, nastavi zeleno temperaturo za prostor, v katerem je nameščena.
